

Diabetes: A Case Study Approach to Exploring Energy Use, the Endocrine System, Cell Signaling and Membrane Transport

Table of Contents

Suggested Materials and Resources	p. 3
Activity One: Energy Journal	p. 4
Activity Two: The Structure and Function of Sugars	p. 11
Activity Three: Acquisition of Energy from the Environment	p. 18
Activity Four: Converting Carbohydrates to Cellular Energy	p. 37
Activity Five: Active and Passive Transport	p. 44
Activity Six: Observing Diffusion Across a Membrane	p. 52
Activity Seven: Quantifying Rates of Diffusion in a Scientific Experiment	p. 56
Activity Eight: Diffusion Experiments and Peer Review of the Results	p. 63
Activity Nine: Kidney Structure and Function	p. 67
Activity Ten: The Insulin-Glucagon Game	p. 80
Activity Eleven: The Insulin Message	p. 98
Activity Twelve: Diabetes Scavenger Hunt	p. 109
Activity Thirteen: The Discovery of Insulin	p. 118
Activity Fourteen: Finding the Messenger	p. 137
Activity Fifteen: Regulating the Translation of Insulin	p. 154
Activity Sixteen: Factors that Contribute to Diabetes	p. 167
Activity Seventeen: How Environmental Selection Pressures Impact a Population	p. 171
Activity Eighteen: Field Trip to a Dialysis Center	p. 187
Activity Nineteen: Debate to Regulate Processed Foods	p. 189
Activity Twenty: Community Awareness and Education	p. 194
Activity Twenty-one: Controlling Your Appetite	p. 195
Activity Twenty-two: Analyzing Patterns of Energy Consumption	p. 203
Appendix: Alignment with the AP College Board Standards	p. 205
