

Hemoglobin: A Case Study Approach to Exploring Proteins, the Cardiorespiratory System, and the Evolution of a Gene Family

Table of Contents

Suggested Materials and Resources	p. 3
Activity One: Modeling the Structure and Function of Proteins	p. 4
Activity Two: Categorizing Amino Acids	p. 15
Activity Three: 3-D Models of Oxygen-binding Proteins	p. 23
Activity Four: Changes in a Molecule Caused by Its Environment	p. 37
Activity Five: Deep-diving Mammals and High-altitude Flights	p. 58
Activity Six: Hemoglobin Homeostasis Card Game	p. 64
Activity Seven: Exploring Respiration Physiology	p. 78
Activity Eight: Collecting and Analyzing Respiration Physiology Data	p. 84
Activity Nine: Explaining Respiration Physiology	p. 88
Activity Ten: Comparative Evolution of Circulorespiratory Systems	p. 91
Activity Eleven: Using Protein Sequences in Phylogenetics	p. 95
Activity Twelve: Tracking Mutations and Gene Duplication Events	p. 113
Activity Thirteen: The Evolution of Oxygen on a Young Planet	p. 119
Activity Fourteen: The Evolution of a Gene Family	p. 128
Activity Fifteen: Comparing Fish Muscle Proteins Using Electrophoresis	p. 141
Activity Sixteen: Build Your Own Model of Cell Respiration	p. 148
Activity Seventeen: Measuring the Rate of Cell Respiration	p. 152
Activity Eighteen: Respiration Efficiency Relay Race	p. 161
Activity Nineteen: Modeling Blood Types	p. 170
Activity Twenty: My Active Bloodstream	p. 175
Activity Twenty-one: Sickle Cell Anemia: Each One, Teach One	p. 179
Activity Twenty-two: Hardy-Weinberg Equilibrium and the Heterozygote Advantage	p. 205
Activity Twenty-three: Hemophilia and the Breakthrough of Recombinant DNA	p. 227
Activity Twenty-four: Blood Substitutes vs. Donor Recruitment Debate	p. 233
Activity Twenty-five: Student-designed Cardiovascular Disease Games	p. 239
Appendix: Alignment with the AP College Board Standards	p. 243
